

# Rehabilitation Protocol for Patella/Quad Tendon Repairs

This protocol is intended to guide clinicians through the post-operative course for Patella/Quad Tendon repairs. This protocol is time based (dependent on tissue healing) as well as criterion based. Specific intervention should be based on the needs of the individual and should consider exam findings and clinical decision making. The timeframes for expected outcomes contained within this guideline may vary based on surgeon's preference, additional procedures performed, and/or complications. If a clinician requires assistance in the progression of a post-operative patient, they should consult with the referring surgeon.

The interventions included within this protocol are not intended to be an inclusive list. Therapeutic interventions should be included and modified based on the progress of the patient and under the discretion of the clinician.

#### Considerations for the Post-operative Patella/Quad Tendon

Many different factors influence the post-operative patella/quad tendon rehabilitation outcomes, including tissue quality and strength of repair. It is recommended that clinicians collaborate closely with the referring physician regarding integrity of repair and any changes to protocol.

#### **Post-operative considerations**

Post-operative considerations If you develop a fever, intense calf pain, excessive drainage from the incision, uncontrolled pain or any other symptoms you have concerns about you should call your doctor.

PHASE I: IMMEDIATE POST-OP (0-14 DAYS AFTER SURGERY)

THASE I. IMMEI	DIATE FUST-OF (U-14 DATS AFTER SURGERT)
Rehabilitation	Protect repair
Goals	Minimize post-operative pain
	Minimize post-operative edema
	Prevent complications from prolonged immobilization
	Prevent and recognize early signs of infection
Precautions	Hinged knee brace should be locked in extension and worn at all times (ambulating, sleeping,
	standing, etc.)
	No active knee extension
	No passive knee flexion beyond 50 degrees- Do not push motion at this point
Weight Bearing	Weight Bearing as tolerated with hinged knee brace locked in extension
Intervention	Swelling Management
	Ice, compression, elevation
	Retrograde massage
	Ankle pumps
	Range of motion/Mobility
	PROM
	Heel slides with towel
	Low intensity, long duration extension stretches: prone hang, heel prop
	Seated hamstring/calf stretch
	Gentle patellafemoral joint mobilization
	dentic patenaremoral joint mobilization
	Strengthening
	• <u>Calfraises</u>
	Quad sets
	Glute set

Criteria to	2 weeks post-op
Progress	Knee extension to 0 deg

PHASE II: INTE	ERMEDIATE POST-OP (2-6 WEEKS AFTER SURGERY)
Rehabilitation	Continued minimization of post-operative pain/edema
Goals	Progress knee flexion PROM
	Progress to full weight bearing status with use of locked brace
	Initiate proximal/distal strengthening (hip, back, abdominals, ankle)
Weight Bearing	<ul> <li>Weight Bearing as tolerated with hinged knee brace locked in extension, should be full weight bearing by 6 weeks</li> </ul>
Precautions	Knee flexion PROM starts at 50 degrees week 2
	<ul> <li>Light overpressure only for PROM</li> </ul>
	Progress 10 degrees/week until 90 degrees achieved
	<ul> <li>60 degree maximum end of week 3</li> </ul>
	o 70 degree maximum end of week 4
	o 80 degree maximum end of week 5
	o 90 degree maximum end of week 6
	Hinged brace locked in extension for standing/walking/sleeping
	<ul> <li>Brace worn at night until week 6 unless otherwise specified by surgeon</li> </ul>
	<ul> <li>Can unlock for sitting/laying (brace angle can be unlocked to available PROM,</li> </ul>
	but not to exceed PROM progression noted above)
	Assistive device for ambulation as needed
Additional	Range of motion/Mobility
Intervention	Patellofemoral Joint Mobilization
*Continue with	Gradual flexion PROM with light overpressure per above
Phase I	Extension PROM with overpressure as needed
interventions	• Heel Slide
	<u>Sitting knee flexion to above ROM</u>
	• <u>Heel prop</u>
	Cardio
	Upper body ergometer
	Strengthening
	Straight leg raise *without lag
	Side lying hip abduction and adduction, prone leg extension
	Standing hip abduction, adduction and extension
	Glute bridge with legs straight elevated on a chair
	• <u>Calfraise</u>
	Core strengthening: <u>Plank as able without discomfort in knee, TA brace progression</u>
	Balance/proprioception
	Standing weight shifts
Criteria to	Full passive knee extension PROM
Progress	Passive knee flexion to 90 degrees
	FWB in brace with no pain
	Active knee extension to 0 degrees with quad set

## PHASE III: LATE POST-OP (6-15 WEEKS AFTER SURGERY)

Rehabilitation	Wean assistive devices if any are still used
Goals	Restore full A/PROM of knee flexion
	Begin stationary bike when able
	Initiate progressive quadriceps loading/resistance exercises
	Restore static single leg balance
	Continue to progress proximal/distal strengthening

Weight Bearing Precautions	<ul> <li>Hinged brace unlocked for ambulation (0-60 degrees) provided patient demonstrates sufficient quad control during stance to prevent buckling         <ul> <li>Use brace until week 8 unless otherwise specified by surgeon</li> <li>Patient should demonstrate sufficient quad control, weight bearing tolerance and single limb stability prior to discharge of brace.</li> </ul> </li> <li>No weight bearing with flexion &gt;90 deg until after 8 weeks</li> <li>A/PROM should be cautioned not to progress faster than 10 degrees per week before 12 weeks post-op</li> <li>Avoid aggressive quad stretching</li> <li>No maximal voluntary contraction of the quadriceps until week 16 (No manual muscle test or</li> </ul>
	handheld dynamometer testing).
Additional Intervention *Continue with Phase I-II	Range of motion/Mobility  Patellofemoral Joint Mobilization  Flexion PROM with overpressure  Heel Slide
Interventions	Sitting knee flexion
	Cardio  ◆ Upper body ergometer
	• Stationary bicycle- Begin with partial rotations minimal resistance and gradually progress time and resistance once full motion is achieved.
	• Elliptical- may begin once active knee flexion motion reaches at least 120 degrees, able to perform 10 straight leg raises without lag, and gait is normalized without assistive device
	Strengthening *Progress strength gradually as appropriate avoiding anterior knee pain, many of the below exercises will not begin until 8-10 weeks or later
	Gym equipment: <u>leg press machine</u> , <u>seated hamstring curl machine</u> and <u>hamstring curl machine</u> , <u>hip abductor and adductor machine</u> , <u>hip extension machine</u> , <u>roman chair</u> , <u>seated calf machine</u>
	Progress intensity (strength) and duration (endurance) of exercises as appropriate *The following exercises to focus on proper control with emphasis on good proximal stability
	• Squat to chair
	<ul> <li><u>Lateral lunges</u></li> <li><u>Romanian deadlift (single and double leg)</u></li> </ul>
	Resisted triple extension in standing
	<ul> <li>Single leg progression: partial weight bearing single leg press, step ups and step ups with march, slide board lunges: retro and lateral, lateral step-ups, single leg squats, single leg wall slides, lateral step down</li> <li>Knee Extension machine at 16 weeks: If quad strength continues to be significantly limited, limiting further progression, may begin using knee extension machine as long as there is no antonion line of discomfort on pain.</li> </ul>
	<ul> <li>anterior knee discomfort or pain</li> <li>Proximal Strengthening: <u>Double leg bridge, bridge with feet on physioball, single leg bridge, lateral band walk, standing clamshell/fire hydrant, hamstring walkout, TA brace with UE and LE progression</u></li> </ul>
	Balance/proprioception
	Progress single limb balance including perturbation training

Criteria to	Good recovery of quadriceps strength
Progress	<ul> <li>Ability to perform 10 single leg squats to 60 degrees</li> </ul>
	<ul> <li>Quad strength of at least 70% on handheld dynamometer: If following standard timeline,</li> </ul>
	and timeline not delayed due to integrity of repair, can test quad strength at week 16
	o Or 100% quad set compared to contralateral side (measured by sphygmomanometer in
	$mmHg)^1$
	Knee flexion PROM to at least 120 degrees
	Single leg stance to 30 seconds on involved side with no significant compensatory pattern
	Symmetrical gait pattern without use of assistive device
	Symmetrical stair negotiation without reliance on UE

### PHASE IV: TRANSITIONAL (4-6 MONTHS AFTER SURGERY)

Restore full ROM and muscle length of quadriceps
Restore quadriceps strength (quad index preferred)
Restore single leg dynamic balance/eccentric control (Y balance preferred)
nitiate return to jog/run protocol as tolerated
Restore proximal/distal strength to symmetry with contralateral side
Avoid pain more than delayed onset muscle soreness (DOMS) during or following exercise especially in the anterior knee/extensor mechanism
Begin sub-max sport specific training in the sagittal plane
Bilateral PWB plyometrics progressed to FWB plyometrics
ress to plyometric and agility program (with functional brace if prescribed)
Agility and Plyometric Program
val running program
• Return to Running Program
<ul> <li>Must have full ROM, resolved swelling, no pain with walking, at least 80% limb symmetry on handheld dynamometer, and ability to perform SL hop with good form prior to initiating jogging progression</li> </ul>
Quad index of at least 90% (handheld dynamometry preferred, if not sphygmomanometer is
Isokinetic dynamometry should be held until 6 months and reserved for cases where advanced return to sport/activity is needed
ymmetrical strength measures in hamstrings and hip (dynamometry preferred)
balance test within 90% of contralateral side
ymmetry in gait while jogging

### PHASE V: PROGRESISVE RETURN TO SPORT (6-8 MONTHS AFTER SURGERY)

Rehabilitation	Progress running/sprinting program
Goals	<ul> <li>Improve multidirectional dynamic movements and control of acceleration/deceleration</li> <li>Improve power in plyometrics and landing mechanics</li> <li>Restore full quadriceps strength</li> <li>Return to sport/competition with minimal risk of re-injury</li> </ul>
Additional Interventions *Continue with Phase II-IV interventions	Add sport specific exercises based on patient's desired sport goals     If participating in a cutting/sprinting sport, increased focus on rapid acceleration/deceleration activities and change of direction drills gradually increasing demand and predictability of drill
Criteria to Progress	<ul> <li>Pass all criteria of the MGB Lower Extremity Return to Sport Functional Testing</li> <li>Quad index of at least 90% (measured by dynamometry, isokinetic preferred)</li> </ul>
